PLANT CARE

Sunlight:

Place your terrarium in a bright area, cacti love indirect sunlight so it's always best to find an area by a window with a well lit environment. We recommend that each plant gets at least 4 hours of sunlight a day preferably in the morning. Never leave your terrarium outside as the sun and high temperatures can burn the leaves of the plants.

Water:

We recommend that you water once every two weeks during summer time and once a month during winter time. The best way to water your terrarium is by using a medium-size syringe. Just direct approximately **20 ml** of water to the base each plant so that the roots get enough moisture. Cacti and succulents do not require so much water as they have shallow roots that take in water quickly and store in their systems, they are low maintenance plants so it is OK for them to go without water for longer periods of time.

PLANT CARE

Your necklace planter is designed to house a healthy plant for as long as you take care of it. So here are some tips to make your plant thrive every time you wear it:

Water:

5-10 Drops of water once a week, if you are using a small syringe just infuse about **1 ml** of water directly in the soil. Just be sure to remove any moss before watering and let the soil dry for **10 min** before placing it back into the planter.

Tiny Wallter models or moss-only pieces do not require any water.

Sunlight:

Always try to leave your necklace by a windowsill or a well lit area. It is recommended that your plant gets about 4 hours of indirect sunlight. It is essential to the growth of the plant.

Do not leave your necklace in the car. High temperatures in low ventilated areas can kill the plant.
